- Cleaning or sweeping back patio.
- Disinfecting service.

We are now offering a disinfecting service in response to the pandemic. Utilizing an electric chemical dispersal system, the particles produced are so small that they remain suspended in the air long enough to kill airborne viruses and bacteria. Dramatically reducing your risk of exposure to infection causing micro-organisms.

The fogging process is used to disinfect individual rooms, entire households, office buildings, reaching areas where manual cleaning cannot. Rapid and efficient.

EPA registered, hospital grade disinfectant cleaner, mold killer and super effective odor eliminator kills 99.99% of bacteria and viruses.
